

PT Clinic Intake

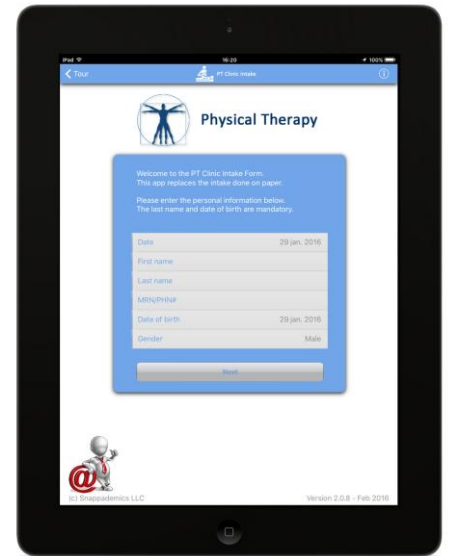

The purpose of this free app is to help physical therapists collect important data that enhances patient therapy.

Target users: Physical therapists who want to provide the best therapy to patients.

The PT Clinic Intake app is interactive and very easy to use. The app that helps physical therapists collect important patient data which can enhance patient therapy. Patients provide data about their medical history and disability using 3 common scientific scales. After a patient answers all questions, a report can be wirelessly printed or emailed for inclusion in medical records. The scientific scales include:

- 1) Quick DASH for disabilities of the arm, shoulder, and hand;
- 2) Modified Oswestry Low Back Pain Disability questionnaire
- 3) Lower Extremity Functional Scale (LEFS).

Unlike many other apps, the PT Clinic Intake app is based on proven scientific methods developed by clinical physical therapists and medical scientists. After a patient answers all questions, a patient report can be printed by a wireless printer or emailed for inclusion in medical records.

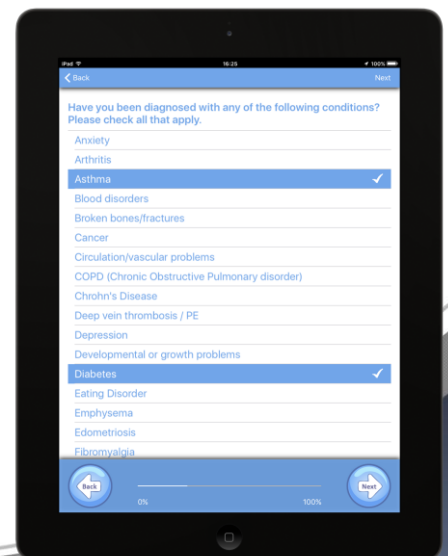

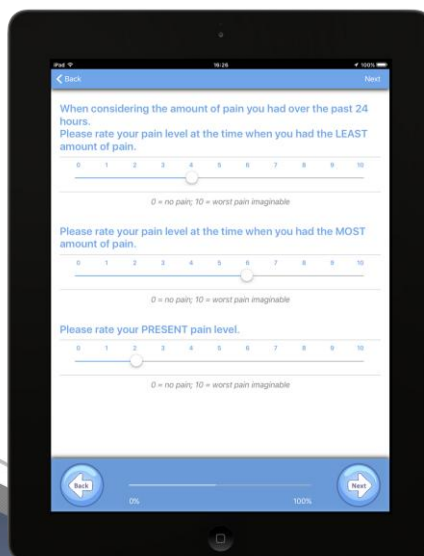

This is the free version of PT Clinic Intake app.

Feel free to contact us if you would like to talk about developing a system for your PT clinic. This custom-made system will let you:

- Change questions, answers, and the patient report.
- Send data to your computer server for Medicare billing.
- Export all patient data to Excel or other software to describe your patient population.
- Calculate summary scores for the 3 scales used.
- Monitor changes in patients over time.
- Include one or more drawings about where patients report pain.
- Transmit the data from the iPad securely behind your firewall.
